

# GDPR – Test Data – Master Data

Austrian Testing Board

13. Juni 2018

Sylvia Andlinger / Robert Lux

# Agenda

- Who we are?
- What is MDM?
- What to expect from a MDM solution / synergies with Test data management
- Setup scenarios in context with test systems
- Live Demo

# Butos data management portfolio

## Standard Platforms

- EBX5
- FuturiX

Austria

## Smart Business Solutions

- Design & develop business solutions

Switzerland

## Project Services

- MDM consulting
- Implementation of EBX5
- Data modelling
- Requirements management
- EBX5 customizations
- Project implementation
- Service provision
- Architecture Consulting

## Operation Services

- Deployment package
- On-Premise support
- Cloud package

Serbia

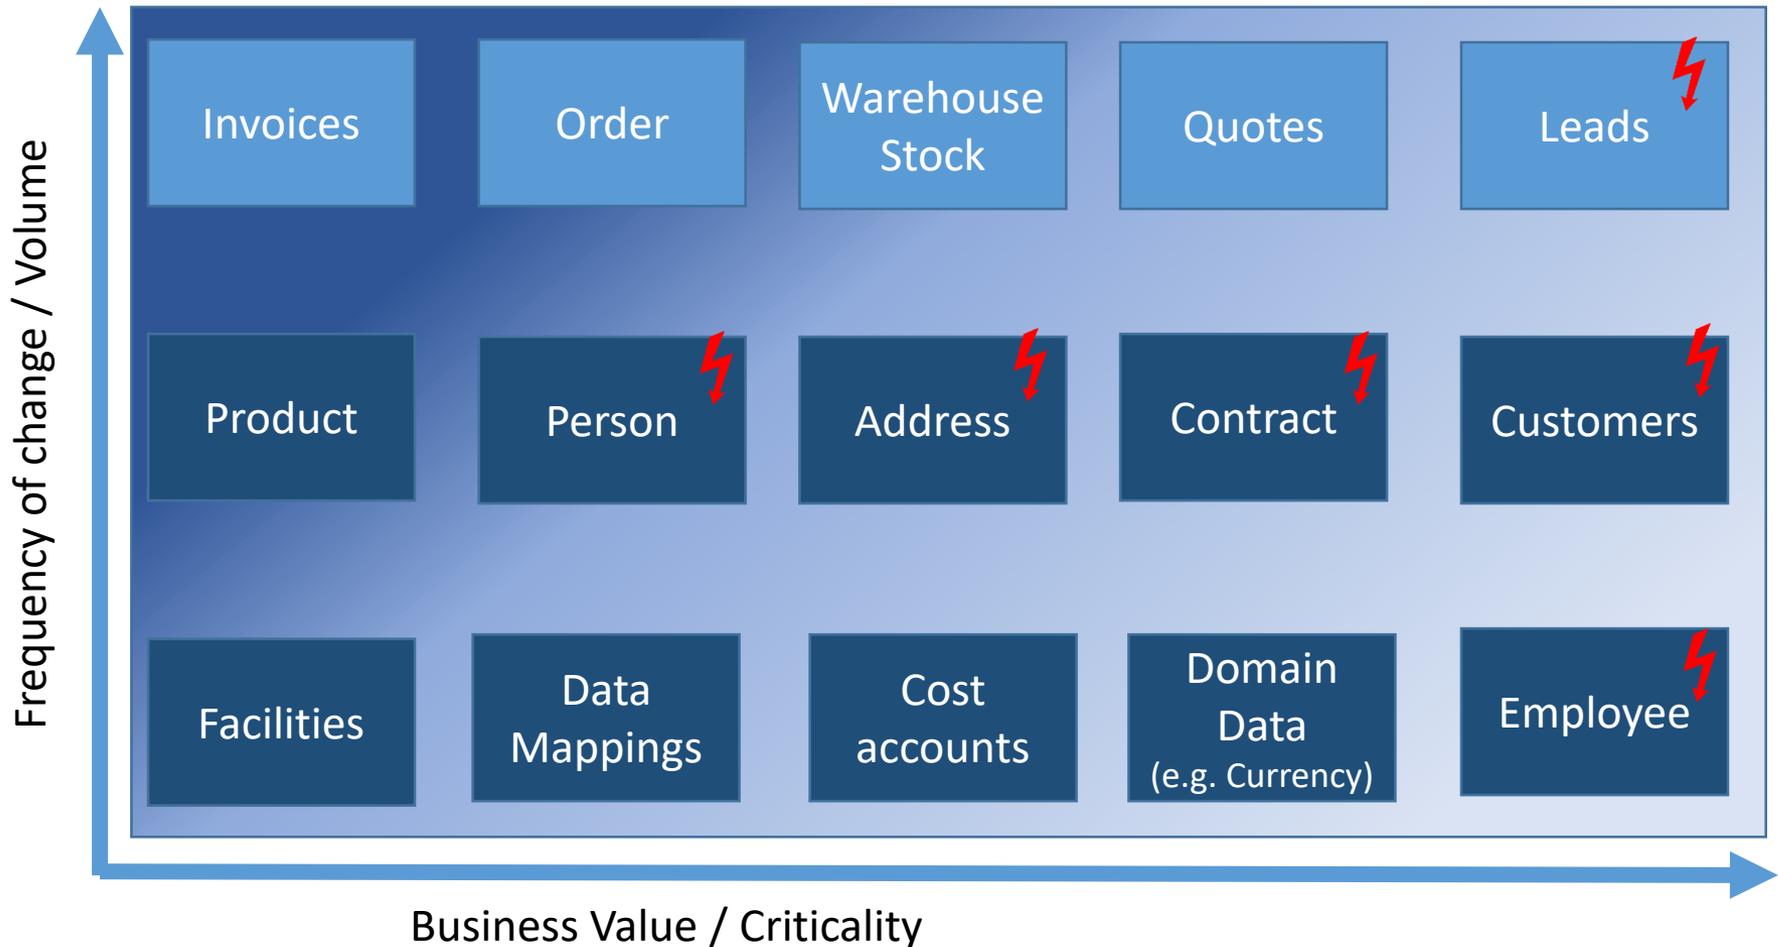

# Definition

master data management (MDM) comprises

- processes
- governance
- policies
- standards
- tools

that consistently define and manage the critical data of an organization to provide a single point of reference

Master Data? Transaction Data? Anonymization needed?  
→ Qualify!!!!

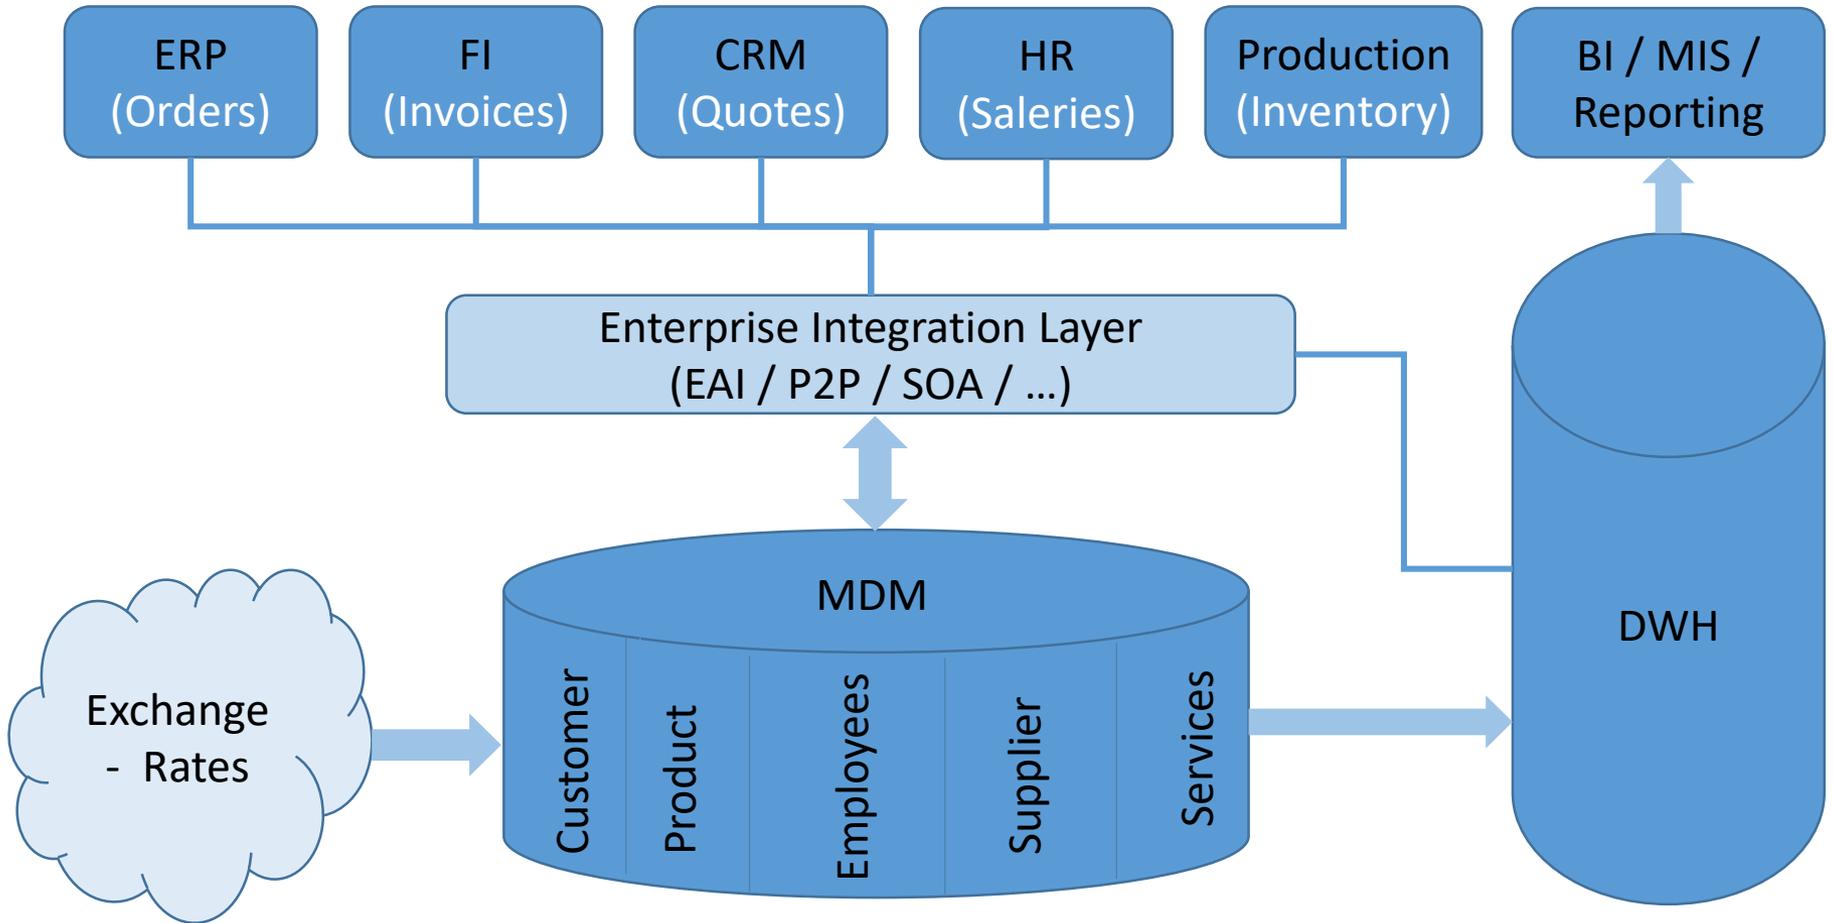

# Capabilities of a MDM system

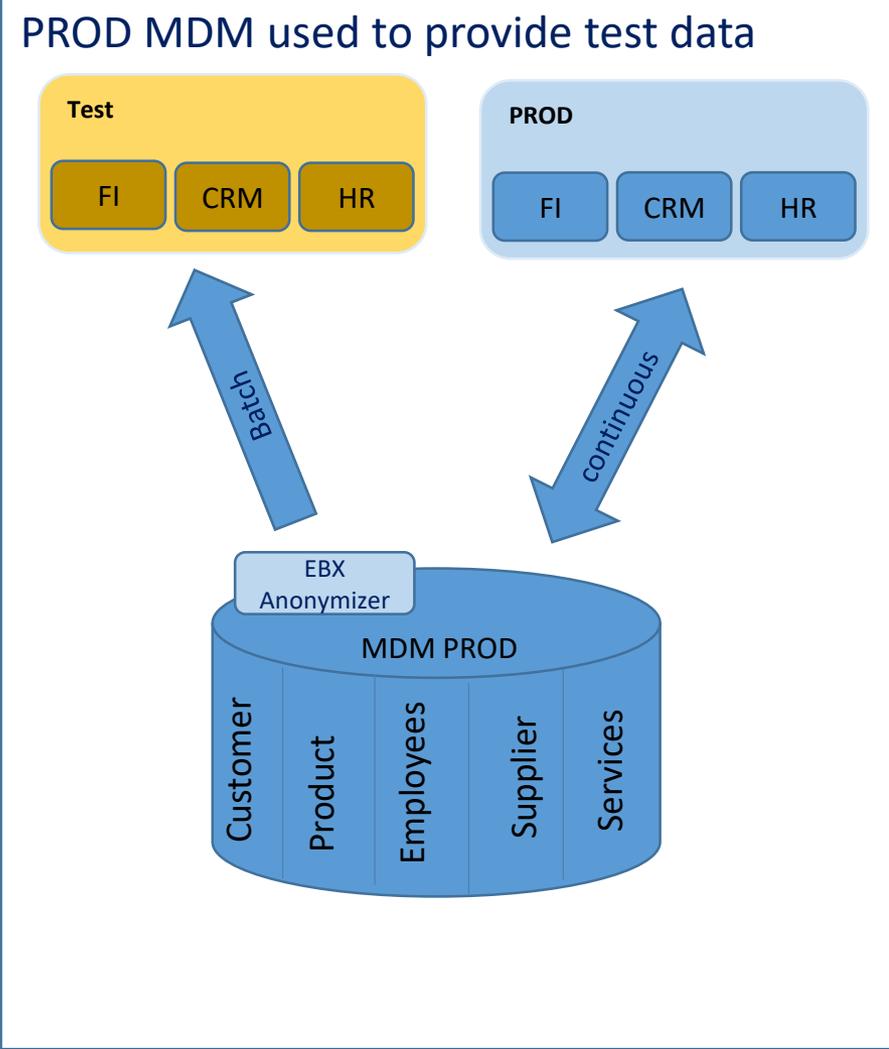

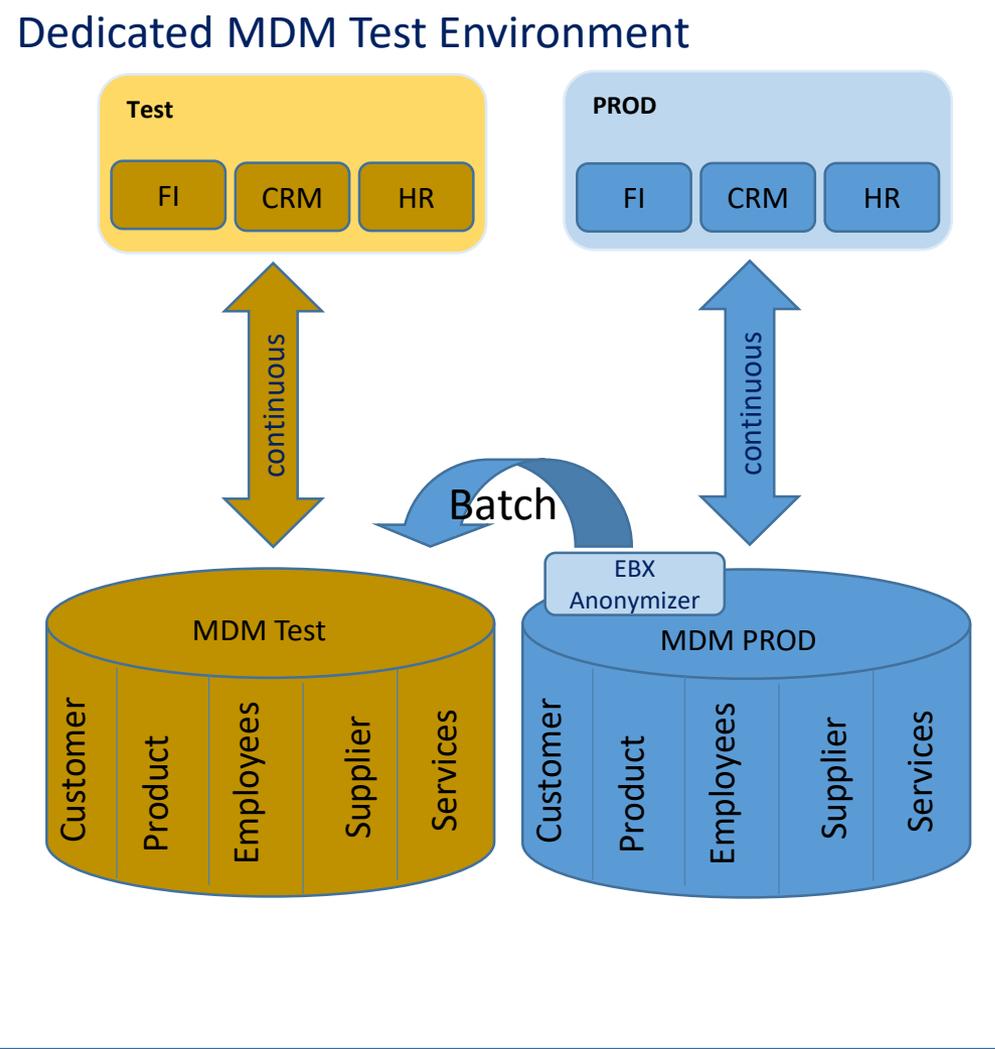

# MDM (Master Data Management) and TDM (Test Data Management): are there synergies?

Features	Description	MDM support
Data Modelling		Native
Data Maintenance		Native
Traceability of changes		Native
Data Governance / Process support	Who is responsible to define which (test) data, who can sign it off, ...	Native
Data Delivery / Exchange		Native
Data Generation		Supported
Data Anonymization		Supported

# MDM in context

# 2 deployment Scenarios

# Live Demo

Thanks!
